

Samantha Blackwell Solution Sales Director

Samantha Blackwell heads the Solution Sales team for RoboVent, delivering comprehensive air quality solutions with a focus on innovative equipment design and turnkey services. Her primary goal is to provide client-centric dust collection solutions that effectively address the specific needs and challenges of industrial clients across various sectors. She strives to understand their unique requirements and develop comprehensive strategies to mitigate dust-related risks and improve air quality within their facilities.

Background

Samantha brings a unique blend of technical proficiency and strategic insight, which allows her to develop custom solutions that deliver tangible results. Throughout her career, she has honed her expertise in addressing complex air quality challenges while aligning with clients' business objectives. Prior to joining RoboVent, she worked in a variety of roles in the energy, environmental abatement, and environmental monitoring industries.

Areas of Expertise

- Air Quality Management
- Emissions Monitoring Technologies
- Oil & Gas Environmental Compliance
- Strategic Planning
- Regulatory Compliance in Air Quality
- Environmental Sustainability
- Coaching and Mentoring

Education

Samantha studied Business Administration at the University of Houston. Her professional accreditations include Fundamentals of Petroleum Refining, EPA Clean Air Act Regulations, EPA Air Quality Management, and Air Quality Monitoring.

Get to Know Samantha

Samantha (Sam to her friends) is passionate about the great outdoors and can often be found hiking, camping, and exploring the wonders of nature. Traveling allows her to immerse herself in different cultures, learning and appreciating the diverse beauty our Earth has to offer. She also volunteers with advocacy groups to promote environmental policies and initiatives at the local, national, and international levels, as well as with groups combatting child trafficking.

”

“I am driven by a passion for environmental sustainability. I believe in the power of innovation and collaboration to create a healthier future for the next generations.”
