

Aftermarket dust collector cartridge filters use high-quality materials and advanced pleat technology for longer filter life. That means lower replacement and maintenance costs for the lifetime of your dust collector filter. We can manufacture replacement cartridge filters for most dust collector makes and models in a wide variety of media types. RoboVent has two different Pleat methods depending on the media type requested which allows us flexibility to meet your needs. RoboVent's PleatLock and endurex RMO technology has been engineered to provide more filter media within the cartridge for extended filter life and reduced maintenance.

PleatLock filters are high-performance cartridge filters with excellent filtration efficiency, performance and longevity. The innovative pleat design results in 35% more filter media per inch for a more compact filter and an overall smaller dust collection system. Dimples in the pleats allow for better airflow and lower pressure drop for enhanced performance and energy efficiency.

Endurex RMO filters use a mini-pleat design with wide pleat spacing for enhanced airflow. RMO support keeps optimal separation between the pleats, which ensures even filter loading and maximizes the available filter media.

Standard Product Characteristics

Base Media:	Cellulose/Polyester Blend Polyester Spunbond
Pulse Layer:	Variety
Max. Temperature:	180°F
Max. Humidity:	95%
ASHRAE Efficiency:	MERV 10/11/15/16
End Cap:	Galvanized Steel
